SSM AGILIS

AGILIS – MISSION/USP

SELF SERVICE MANAGEMENT AGILIS the evolution of the historical fuel management system from PIUSI, specifically designed for simple authorization of fuel access and **recording of transactions on a PC**.

For **small and medium-sized companies** mainly in Agriculture, Transport and Construction.

The FMS that offers a **wide range of solutions** (dispensers, different sizes/voltages) to meet the variety of companies that use it.

For users who need a **simple** system that is **easy** to understand and **configure**, even **stand-alone** (without sw). An excellent compromise between **performance and convenience**.

SSM AGILIS - INTRO

- There are companies that decide to manage the refueling of their vehicles/machinery independently through one or more private tanks.
- Many of them dispense fuel through a 'non-controlled' pump/dispenser but realize that they would like to authorize access to the fuel only to certain persons in a simple form.
- Some of these companies would then like to record the transactions and be able to view and download them on their PCs.
- These companies work mainly in Agriculture, Transport and Construction, more generally in any sector that uses diesel vehicles
